Individual and Population Health Journey

Healthcare Today Comes with Challenges

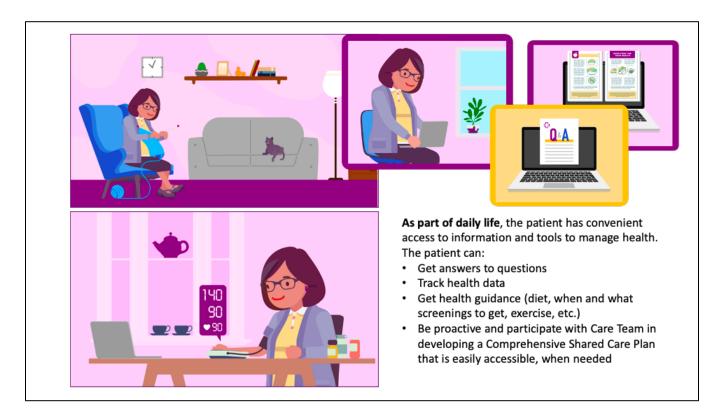

- Healthcare Today Comes with Challenges
- Future Patient Experience
- Future Care Team Experience
- Future Vision Workgroup 2019 Report

Imagine If ...

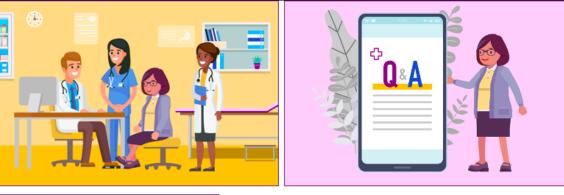

In 2019, the ACTS Future Vision Workgroup defined what patient care – supported and improved by Learning Health Systems, the knowledge ecosystem and sharable data – looks like the Future Vision.

Future Patient Experience

Future Care Team Experience

As normal routine, a Care Team can easily access resources and tools, informed by the best evidence, to aid decision-making and improve work satisfaction.

They can:

- Easily gather, integrate, prioritize, and review critical patient data (including patient gathered data) to enable proactive healthcare; including shared decision making with patients
- Easily make the right decisions, act and document care based on the latest guidance and evidence
- Optimize care for both individuals and populations via a population management perspective that helps identify and close care gaps.

The future experience is supported by the knowledge ecosystem and LHS(s) where data is based on standards and easily sharable.

Future Vision Workgroup 2019 Report

The Future Vision Workgroup 2019 report not only described the enhanced patient care experience but also addresses the improved experience for all contributors to the LHS cycle; finally, it identifies the gaps and next steps for achieving this future vision. **Check out the links below to learn more:**

Care Delivery

Resource Developers

Learning Health Systems

One resource for helping your organization achieve the future vision is creating a patient journey/service blueprint. Read Patient Journey and Service Blueprint How Tos.

Patient, family and caregiver engagement is also essential to achieving the future vision health journeys and LHSs more broadly; learn more about that here.
